Edmonton Forklift License

Edmonton Forklift License - Getting a forklift license or forklift certification within North America would require the trainee to perform hands-on training in addition to classroom instruction. The state, provincial and federal regulatory bodies are responsible for the licensing, certification and training for powered industrial truck operators. Operators could get a license either through training administered by the employer or by a third party. In any case, regulatory requirements need to be met. Recertification is necessary every two to three years.

Forklifts are powered industrial trucks that come with a variety of options, such as sit-down and stand-up. There are different types and sizes of forklift suitable for different industrial applications. Operator training courses are usually individualized to deal with the specific uses and kinds for which the operator is training. Training on a gas-powered, sit-down lift truck in a warehouse surroundings will not be the same as training on a stand-up, propane-powered forklift in a shipyard. The variety of forklifts and their uses makes it impossible to establish universal licensing requirements for all businesses and machinery. Regulatory standards, hence, tend not to focus on particular course requirements but instead on the outcome of individual training programs.

On the job training that is offered by the employer is the most common way of forklift training certification and licensing. The employer who offers this method of certification is required to offer practical training and classroom sessions on equipment at their place of work. Employers could opt to train staff on every type of forklift separately, or to train them on all equipment combined. The curriculum incorporates lift truck operation procedures, company rules, forklift maintenance and safety measures. Topics specific to the worksite, such as hazardous materials or conditions, should be included. Following classroom learning, operators are taught how to safely use and operate each type of forklift on the worksite.

Certification through a third-party vendor usually requires an on-site component along with hands-on practice.

Usually, an employer-provided certification will not transfer from the current employer to the next employer. Acquiring a forklift license through employer-provided training enables the operator to operate a forklift for that particular employer only.

The most important factor of forklift license training is forklift safety. The exact safety training requirements vary from one type of machine to another. Safety issues differ from industry to industry and from employer to employer. Both third-party providers and employer-provided training might have to address extra requirements for safety training in applicable industries, such as in marine and offshore operations.
