Edmonton Telehandler Certification

Edmonton Telehandler Certification - Telehandler certification programs are both for operators who have some experience driving a typical forklift and for people with no experience. The real-world training offered by these programs produces graduates well versed in the safe and proper use of these kinds of machines.

Telehandler certification courses can be finished at a third party location or at the work site of the trainees. To be able to get the formal training at a specific training facility, the manufacturer could work out a licensing agreement to bring other individuals to a training facility. This option offers those training with the chance to learn to use the machines in a controlled setting. When completed, participants are given a license or certification to use this type of machinery.

With the latter alternative, a skilled instructor is sent to a work site to provide on-location training. This option ensures that the trainee is instructed on actual machinery that will be utilized on the job, and prepares the one training for the demands of that specific environment. Individuals training learn about possible dangerous situations which can occur on the actual work location. The instruction focuses on whatever conditions that are specific to the work place, allowing operators to be ready to handle these elements more safely.

The word "telehandler" is an abbreviated version of "telescopic handler," referring to a machine which has an extending or telescoping arm supporting a fork. A telehandler has different controls and characteristics similar to a forklift. A telehandler has the capability of transporting and lifting loads up and away from the vehicle. Wrong operation of telehandlers could result in serious accidents. If load limits are exceeded, the equipment could tip because of excess weight on the lift. It is the duty of the operator to know load restrictions and to make use of these machinery safely.

Telehandler courses designed for operators who are already certified to utilize a forklift are called "conversion" classes. These classes teach the differences between telehandlers and forklifts, and avoid repeating information which forklift operators already know. For trainees who have no past experience using telehandler equipment, training consists of the basic operation and utilization of the equipment. Some groups also offer refresher programs.
