

Edmonton Aerial Lift Training

Edmonton Aerial Lift Training - An aerial work platform is a mechanical access platform. This machinery provides access to otherwise inaccessible places for people or equipment. Also known as an elevating work platform or aerial device, the device is often used to be able to access high areas. Construction and maintenance employees normally should utilize aerial work platforms on the job. They are used by firefighters for emergency access.

Designed for temporary use, aerial work platforms are distinguished from elevators, which provide permanent access to high places. An aerial work platform is designed to be operated by a single individual, and can lift weights of less than one ton. Various types have load limits that are higher. There are different types of aerial work platforms; like for example, there is a "scissor lift" and a "cherry picker".

A lot of the aerial work platforms are equipped with compressed air connectors for power tools and electrical outlets. For specialist tasks, like lifting frames for window glass, an aerial work platform can come along with special equipment.

Individuals who want to operate an aerial lift device must undergo training. Normally, the members of a Health & Safety Committee and their representatives are responsible for the inspection of each machine and work places and are likewise needed to go through training. Trainees would become familiar with how to use an aerial lift device. They will likewise gain an understanding of the regulations which apply to safely using these machinery. Regulations vary within different provinces, and within worksites which are federally regulated.

Employees who are required to be lifted or work near an aerial lifting device has to be aware of all the possible hazards. In a general safety session, an Aerial Lift Training Video can be shown to be able to educate all of the staff who work near them or are lifted by them.

Aerial Lift Training Program comprises modules focused on the following: Hazard Identification; Aerial Lift Devices and Operating Controls; Pre Operational Checks for Aerial Lift Devices; and Platform Positioning & Park Positioning. The program is designed to train workers on safely using boom-supported, self-propelled elevated work platform and self-propelled, elevated work platform. Employees who finish the program would be given a certificate, signed by an individual qualified to confirm the successful completion of a hands-on practical exam.
